genetics 158:811-832(2001).
-!-FUNCTION: Catalylyses the cyclization of the ubiquitous isoprenoid
intermediate geranylgeranyl diphosphate to taxa-4,11-diene, the
parent olefin with a taxane skeleton.
-!-CATALYNIC ACTIVITY: Geranylgeranyl diphosphate = taxa-4,11-diene
diphosphate.
-!-ATALWIY Taxol biosynthesis; first step.
-!-SIMILARITY: Belongs to the terpene synthase family.
                                                                                                                                                                                                                 RESULT 1

"Cloning, expression, and characterization of taxadiene synthase, a diterone cyclase from Taxus chinensis.";
Submitted (AUG-2000) to the EMEL/GenBank/DDBJ databases.
-!- FUNCTION: Catalyzes the cyclization of the ubiquitous isoprenoid intermediate geranylgeranyl diphosphate to taxa-4,11-diene, parent olefin with a taxane skeleton.
-!- CATALYTIC ACTIVITY: Geranylgeranyl diphosphate = taxa-4,11-diene diphosphate.
                                                                                                                                                                                                                                                                                                                                                                                                               28-FEB-2003 (Rel. 41, Created)

Chen X.-Y., Chen Y., Heinstein P., Davisson V.J.;
Choing, expression, and characterization of (+)-delta-cadinene synthase: a catalyse for cotton phycoalexin biosynthesis.";
Arch. Biochem. Biophys. 324:255-266(1995).
I-FUNCTION: Responsible for the cyclization of trans, trans-farnesyl diphosphate (FPP) to (+)-delta cadinene.
I-CAPALYTIC ACTIVITY: 2-trans, 6-trans-farnesyl diphosphate = (+)-delta-cadinene + diphosphate.
I-PATHMAY: Phytoalexins gossypol and lacinilene C biosynthesis;
first (committed) step.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    49; Gaps

Meng Y., Jia J., Liu C., Liang W., Zhou X., Heinstein P., Chen X.-Y.;
Submitted (FEB-1996) to the EMBL/GenBank/DBBJ databases.
-! FUNCTION: Responsible for the cyclication of trans, trans-farnesyl
diphosphate (FPB) to (+)-delta cadinene.
-! CATALYTIC ACTIVITY: 2-trans, 6-trans-farnesyl diphosphate = (+)-
delta-cadinene + diphosphate.
-!- PATHWAX: Phytoallexins gossypol and lacinilene C biosynthesis;
first (committed) step.
-!- SIMILARITY: Belongs to the terpene synthase family.
                                                                                                                                                                                                                                    VEMYFSVAVSMFEPEFAACRIAYAKTSCLAVILDDLYDTHGSLDDLKLFSEAVRRWDISV
